CITY OF DUBLIN LAUNCHES OPEN DATA BUDGET REPORTING PROGRAM ON WEBSITE

OpenGov Application Enables Dublin Residents to Further Explore Financial Data Online

Dublin, Calif., September 3, 2013 - The City of Dublin has launched an interactive and user-friendly online database of the City's budget data, using software developed by OpenGov.com, a Silicon Valley software startup. By utilizing the OpenGov Transparency application, the City is providing citizens with enhanced budget information.

While the City's budget and financial data had already been available to the community on the City's website, this new application provides users an exciting way to view the information with interactive graphs and charts.

The public is encouraged to explore the City's financial data via the OpenGov database on the City's web site, or directly at www.dublin.opengov.com

"We pride our agency as being fully accessible to the community; this new application will assist citizens by creating faster and clearer graphics," said City Manager Joni Pattillo.

As cities, counties, and other jurisdictions continue to transition to the digital age, there will be more opportunities for cities to utilize state-of-the-art technology to connect with residents. OpenGov, founded by Stanford technologists and backed by prominent Silicon Valley entrepreneurs and investors, is helping local government do just that.
